1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

42 young are comely, of a buxom type, and, like the men, with highly-developed calves, the latter always being considered a beauty. The children are frequently remarkably pretty. Khasis carry very heavy burdens, it being the custom for the 42 cooly of the country to carry a maund, or 82 lbs. weight, or even more occasionally, on his back, the load being fixed by means of a cane band which is worn across the forehead; women carry almost as heavy loads as the men. The coolies, both male and female, commonly do the journey between Cherrapunji and Shillong, or between Shillong and Jowai, in one day, carrying the heavy loads above mentioned. Each of the above journeys is some thirty miles. They carry their great loads of rice and salt from Therria to Cherrapunji, an ascent of about 4,000 feet in some three to four miles, in the day. The Khasis are probably the best porters in the north of India, and have frequently been requisitioned for transport purposes on military expeditions.

157 The people are cheerful in disposition, and are light-
522 hearted by nature, and, unlike the plains people, seem to thoroughly appreciate a joke. It is pleasant to hear on the road down to Theriaghat from Cherrapunji, in the early morning the whole hillside resounding with the scraps of song and peals of laughter of the coolies, as they run nimbly down the short cuts on their way to market. The women are specially cheerful, and pass the time of day and handy jokes with passers-
[44] by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-
[523] tempered, but are occasionally prone to sudden outbursts of
[m] anger, accompanied by violence. They are fond of music, and rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring,
573 and the women make excellent nurses for European children,
463 frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi
517 loves a day out in the woods, where he thoroughly enjoys
524 himself. If he does not go out shooting or fishing, he is con-
525 tent to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

which are not found usually in the people of India. He is not above manual labour, and even the Khasi clerk in the Government offices is quite ready to take his turn at the hoe in his potato garden. The men make excellent stonemasons and carpenters, and are ready to learn fancy carpentry and mechanical work. They are inveterate chewers of *supari* and the pan leaf (when they can get the latter), both men, women, and children; distances in the interior being often measured by the number of betel-nuts that are usually chewed on a journey. They are not addicted usually to the use of opium or other intoxicating drugs. They are, however, hard drinkers, and consume large quantities of spirit distilled from rice or millet. Rice beer is also manufactured; this is used not only as a beverage, but also for ceremonial purposes. Spirit drinking is confined more to the inhabitants of the high plateaux and to the people of the Wár country, the Bhois and Lyngngams being content to partake of rice beer. The Mikirs who inhabit what is known as the "Bhoi" country, lying to the north of the district, consume a good deal of opium, but it must be remembered that they reside in a malarious *terai* country, and that the use of opium, or some other prophylactic, is probably beneficial as a preventive of fever. The Khasis, like other people of Indo-Chinese origin, are much addicted to gambling. The people, and especially those who inhabit the Wár country, are fond of litigation. Col. Bivar remarks, "As regards truthfulness the people do not excel, for they rarely speak the truth unless to suit their own interests." Col. Bivar might have confined this observation to the people who live in the larger centres of population, or who have been much in contact with the denizens of the plains. The inhabitants of the far interior are, as a rule, simple and straightforward people, and are quite as truthful and honest as peasants one meets in other countries. My impression is that the Khasis are not less truthful certainly than other Indian communities. McCosh, writing in 1837, speaks well of the Khasis. The following is his opinion of them:—"They are a powerful, athletic race of men, rather below the middle size, with a manliness of gait and demeanour. They are fond of their mountains, and look down with contempt upon the degenerate race of the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

this manner, the males earning on an average 8 annas and the females 6 annas a day. Col. Bivar writes that in 1875 the wages for ordinary male labourers were 4 to 8 annas a day, and for females 2½ to 4 annas, so that the wages rates have almost doubled in the last thirty years. Contractors, however, often manage to obtain daily labour at lower rates than those paid by Government. Stonemasons and skilled labourers are able to get higher rates. It is easier to obtain coolies in the Khasi than in the Jaintia Hills, where a large proportion of the population is employed in cultivation. The Khasis are excellent labourers, and cheerful and willing, but they at once resent bad treatment, and are then intractable and hard to manage. Khasis are averse to working in the plains in the hot-weather months.

APICULTURE.

I am indebted to Mr. Rita for the following remarks on apiculture in the Khasi and Jaintia Hills.

There are two kinds of indigenous bees in the Khasi Hills, one domesticated, called *u ngap* (*apis Indica*), and the other *u lywai*, which is never domesticated, and is very pugnacious; its hives are difficult of access, being always located in very high cliffs. A few hives of a third class of bee are now-a-days to be found in and around the station of Shillong, i.e. the Italian. This bee was imported into the hills by Messrs. Dobbie and Rita, and the species became propagated in the following manner. The bees had been just established in a hive, where they had constructed a brood comb, when the hive was robbed by some Khasis for the sake of the *larvæ* it contained, which they wished to consume as food; but the queen bee escaped and established other colonies, one of which was afterwards captured by Mr. Rita, the others establishing themselves at places in the neighbourhood. The hive used by the Khasis is of a very primitive description. It is usually a hollow piece of wood, about 2½ to 3 ft. in length and 10 or 12 in. in diameter. A small door is placed at each end of the log, one for the bees to go in and out, and the other for the removal of the honey when wanted. The honey-combs are broken and the honey is

764
782 rich, or in a kind of coffin (shyngoid). In the first case, a steer (ox) is sacrificed, in the other case a pig (u 'niang shyngoid). The horns of the steer (u masi pyllait) are painted gold or silver. Today one does this only with gold or silver paper. Then the animal is let loose after it has been strewn with rice and sprinkled with water ('iad-um). Anybody who captures it can keep it or kill it. As soon as the animal is let loose, one calls it masi-tamrong. If one wants to set up on the cremation area bamboo poles with white cloth pieces on them as if they were flags, which is only done for the very well-to-do, a rooster (u 'iar kait) is sacrificed.

● [461] Since no work may be done on the day of cremation, all the preparations must be completed, such as fetching wood from the forest ('law kyndang), erecting the funeral pyre, arranging for the necessary sacrificial animals and other sacrificial gifts, etc.

4. The Cremation (ka jingthang).

The Khasi burn their dead. At the crematory ceremony one can distinguish various classes or kinds, either according to the wood [431] which is used or according to the catafalque (scaffolding for the body or structure above the dead person) which is erected.

The methods of cremation according to the differences in the wood are:

1. The cremation, for which only uncut wood is used, that is, wood as it is found without any kind of preparation. This type of cremation is made only by the very poor (uba duk eh) who have no more relatives. There is no sacrifice made at this cremation

on from October to December. For millets the seed is sown in April-May and reaped about six months later. Maize is usually sown in April-May and ripens in August-September. For potato, generally three crops are raised in the district; the first is sown in December-January and harvested in April-May, the second is sown in February-March and is gathered in June-July and the third is sown in July-August and is harvested in November-December.

For oranges and betelnut the orchards are cleared of weeds twice a year. Harvesting of orange takes place from October to January. Betelnut ripens at the beginning of the year and are collected between February and May.

2.6.3 **Agricultural implements.**—The usual agricultural implements are a hoe, a sickle, three or four kinds of doas, a harrow, a crowbar which is used for the construction of irrigation channels, 'sierras' and winnowing baskets. Bullock drawn plough is used in wet paddy cultivation in parts of Jowai subdivision and in Bhoi area and resembles the one in use in the plains of the State.

2. 6. 4. **General cultural practices.**—The cultivators mostly adhere to their indigenous practices of cultivation. Rotation of crops is not widely used. Cultivation of rice is usually done by broadcasting the seeds though transplanting is also in vogue in some areas. Mixed cropping is widely practised. Cultivation by making terraces in the hill slopes is gaining popularity in the district.

2.7 **Cottage Industries.**—Cottage Industries, it appears, have not found very great favour among the people of the district. A few families here and there manufacture iron implements, earthenware, pottery, baskets, mats and jewellery. In striking contrast with other districts weaving of cotton clothes is rare among the Khasis. The Mikirs in Bhoi area and in areas adjoining North Cachar and Mikir Hills practice it only for their domestic consumption. At present, the Government is trying to popularise weaving in the district and this has been welcomed by the Khasis. Among other cottage industries production of eri cocoon in the northern part of the district adjoining Kamrup district and bee keeping throughout the district are worth mentioning.

2.8 **The People.**—The Khasis and Jaintias are a short sturdy race distinct from the neighbouring hill tribes. By nature they are hardy and laborious and in respect of manual labour, they are free from any inhibition. Side by side with the Khasis live the Mikirs, Garos and Nepalis who form respectively 7.32 percent, 3.38 percent and 3·27 per cent of the total rural population. Besides, there are plains people who are mainly concentrated in the town of Shillong. In the marketing centres of the border area there are a large number of Bengali Hindus who dominate the bulk of the trade in the border areas.

2.9 **Occupation.**—The greater portion of the population of the district subsists on cultivation. More than 75 percent of the rural households are predominantly agricultural. The industrious Khasi agriculturists males and females have a high regard for hard labour

19: Assam G-5 (1958) 1963 AR7 Khasi AR7

and even the well to do ones do not feel anything to work as labourers in other's farms. It is almost customary among the agriculturists to work in other's farms on wage basis, when agricultural operation in one's own farm are over. This is probably an outcome of the difficult transport situation. Among the non-agriculturists and those who follow agriculture as subsidiary occupation, a large number are porters and labourers engaged in jobs like transporting of goods from place to place, collection of limestone, sand, fuel, Collieries and forests of the district also offer employment to a good number of people. Since the taking up of road programme under the plan, a large number of people are getting employment in construction of roads, etc. It is heartening to note that for construction of roads, may for all kinds of works demanding unskilled labourers, the district locally supplies the whole labour force. People in the various local points of the district, particularly those living in higher hills are mainly engaged in trade. The Khasis are indefatigable traders and have been able to keep almost the whole of the small trade in the district in their own hands. A small proportion of the people are engaged in cottage industries such as stone cutting, brick making, bee keeping, blacksmithy, cane and bamboo works, etc.

The number of persons returned in the 1951 census under each of the eight main livelihood classes for the rural tract of the district was as follows.

TABLE 1

Number of Persons (Source 1951 Census)

Head	Male	Female	Total	P.C.
(1)	(2)	(3)	(4)	(5)
A. Agricultural class:—				
1. Cultivators of land wholly or mainly owned and their dependents.	90,603	92,107	1,82,710	59·89
2. Cultivators of land wholly or mainly unowned and their dependents.	16,014	16,109	32,123	10·53
3. Cultivating labourers and their dependents.	14,053	14,941	28,994	9·50
4. Non-cultivating owners of land, agricultural rent receivers and their dependents.	344	562	906	·30
Sub-total	1,21,014	1,23,719	2,44,733	80·22
B. Non-agricultural class:—				
5. Production other than cultivation.	11,791	10,309	22,103	7·24
6. Commerce	3,237	4,069	7,306	2·39
7. Transport	355	264	619	·20
8. Other services and miscellaneous sources.	17,462	12,864	30,326	9.95
Sub-total	32,848	27,506	60,354	19.780
Total	..	..	3,05,087	100.00
